# NPS Ball Bearings

OEM's that develop and deliver products with cutting-edge features, high dependability and robust performance understand that building high quality machines requires high quality spares and high performance ball bearings form an integral part of every machine.

From dimensions and load ratings to RPM and weight, every attribute of a ball bearing has the potential to influence the performance of the final product. Servicing these needs of the manufacturing sector and the growing demand for high performance ball bearings is Bearing Distributors.

## Our Promise – NPS Ball Bearings

---

We bring to you NPS Ball Bearings – a range of high-quality bearings with impressive load-bearing capacity. Engineered to the highest degree of precision, NPS ball bearings deliver a robust performance.

Since the brand's inception in 2008, NPS has grown to signify reliability and trust with our customers. Our ball bearings are carefully designed to ensure world-class quality.

## The Range

---

NPS offers a wide range of deep groove, miniature, and pillow block bearings. Our bearings find application across diverse industries such as textile, automobile, power tools, fans, motors, etc., conforming to the specific quality standards of the respective industries.

Every industrial application has its unique specifications. Therefore, we give special attention to designing customized ball bearings that comply with the unique requirements. We leverage our abilities and experience to provide OEMs and distributors the perfect bearing solutions for their needs.

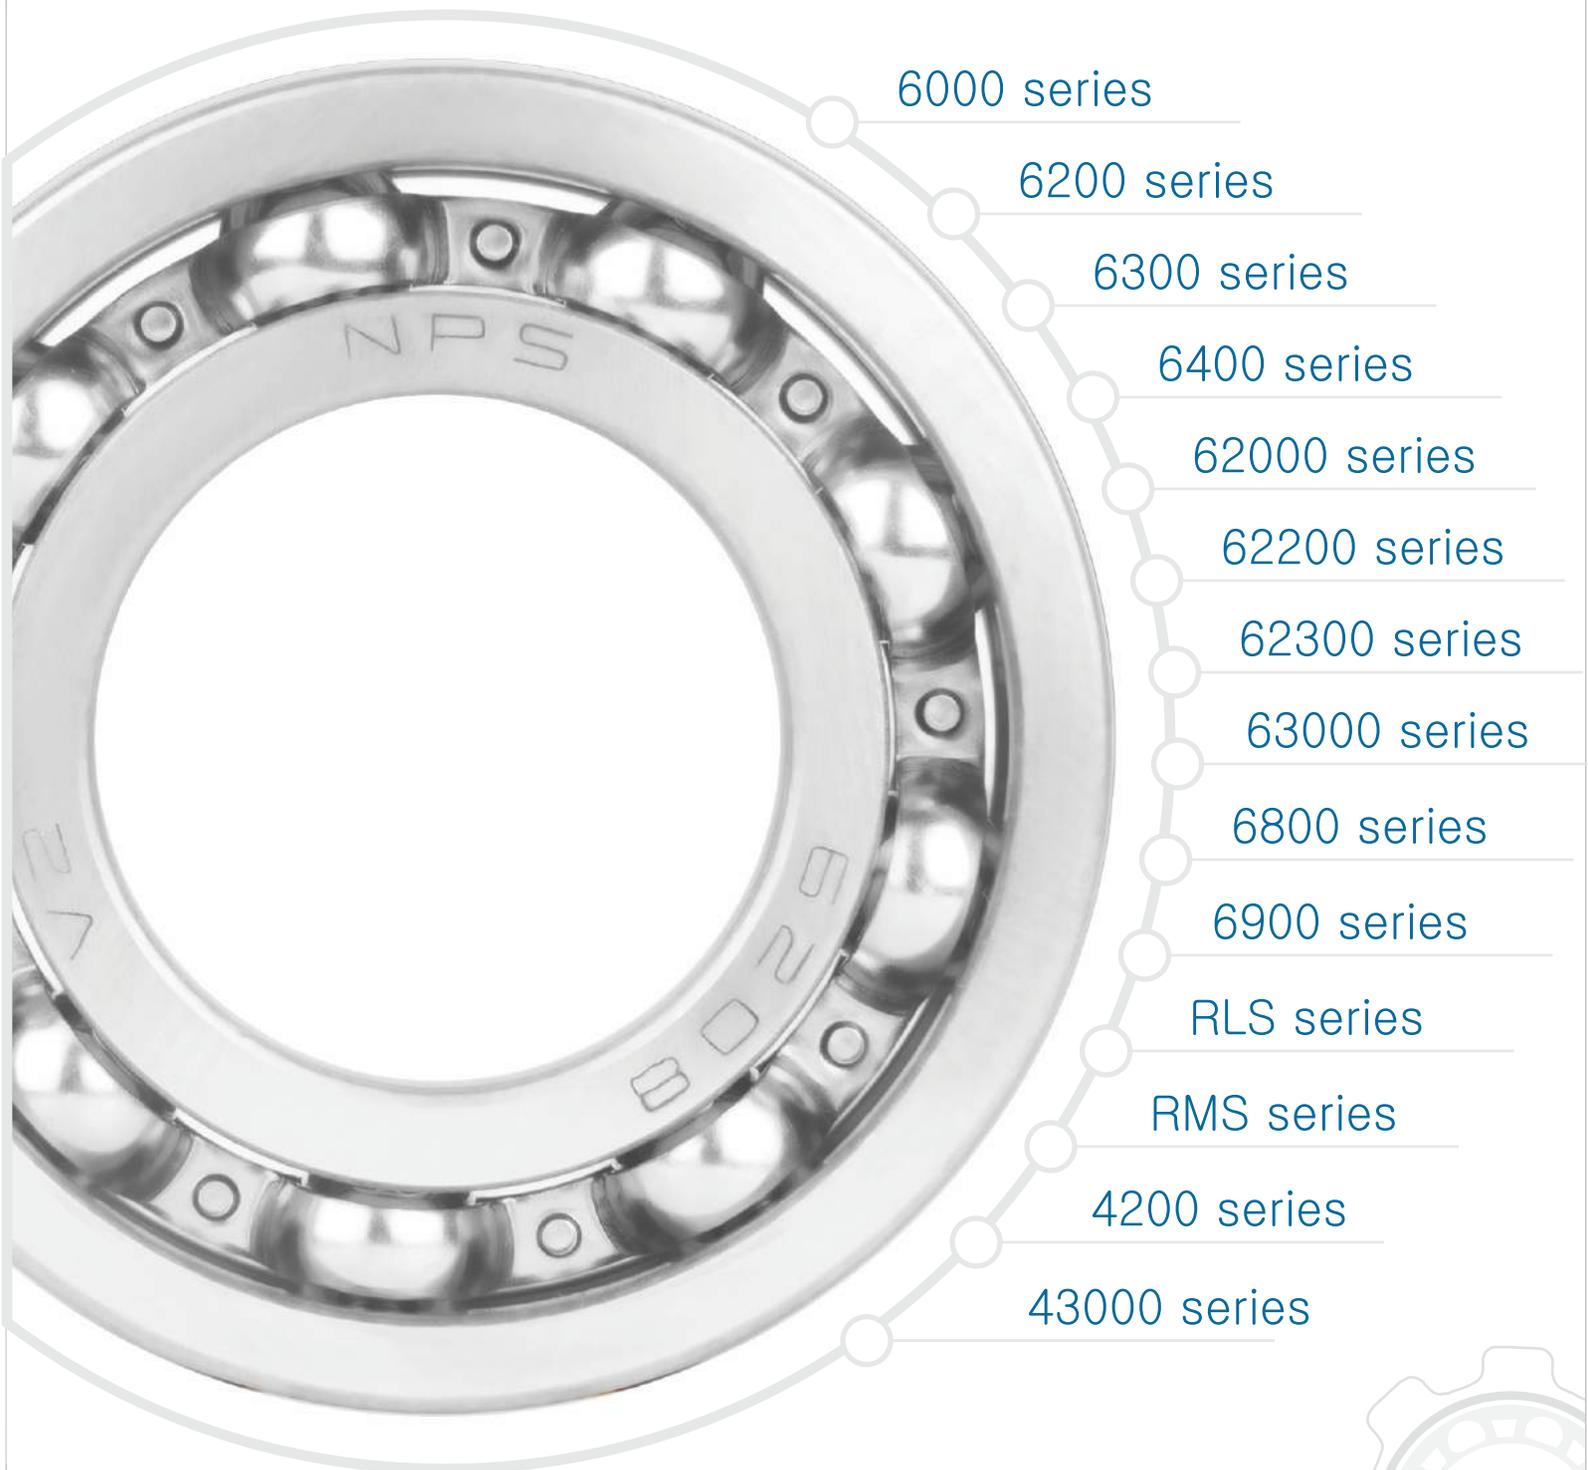

We are customer-centric and believe in providing best-in-class products and services. Our highly-skilled experts offer end-to-end services, extending full support in case of any defect.

# Range & Specifications

## Deep Groove Ball Bearings

NPS offers a wide range of deep groove bearings across specifications and industry norms. These bearings have excellent load capacities, are great for high-speed applications, and require little maintenance. They are designed to increase the flexibility of operations.

NPS deep groove ball bearings come in the following series:

## Miniature and Extra Small Ball Bearings

NPS offers a comprehensive range of miniature and extra small ball bearings that are ideal for light-load and high-speed operations. With speeds of up to 108000 RPM, our miniature and extra small ball bearings require little maintenance and are ideal for machines such as power tools, textile machinery, etc.

## Pillow Block Ball Bearings

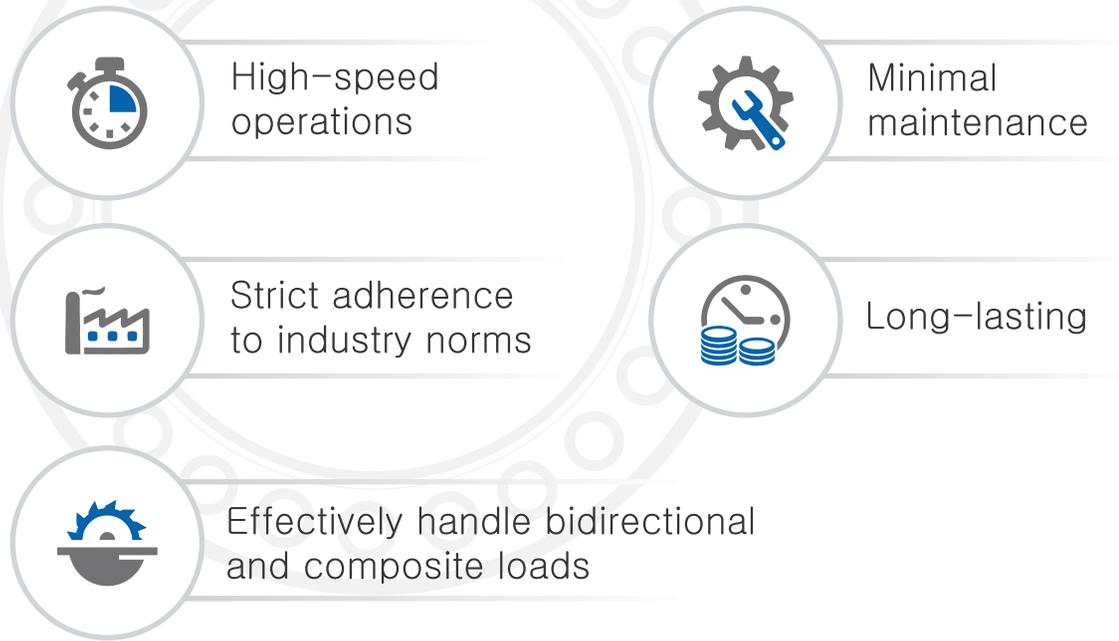

The pillow block ball bearings designed by NPS are ideal for mounted units and provide rigid shaft support in cases where the mounting surface is parallel to the shaft axis. Our pillow block ball bearings can be used for a variety of light-duty as well as heavy-duty applications.

We engineer pillow blocks according to your requirements across a wide range of dimensions and weights. Enlisted below is the numerical series of pillow block ball bearings that we offer:

# Deep Groove Ball Bearings

Keeping in mind the customer requirements, NPS Deep Groove Ball Bearings are made with high precision. These products use standard cages of stainless steel for high-load application, as well as cages of other metals such as brass for high-speed applications.

## Features

Being versatile and self-retaining, NPS deep groove ball bearings give robust performance with zero maintenance. Enlisted below are some features of NPS deep groove ball bearings:

### Solid Design:

NPS bearings have solid outer rings, inner rings, balls, and cages.

### Optimal Geometry:

The raceways are so designed that all the balls support axial and radial forces from both the directions.

### Low Torque:

NPS bearings are designed to have low torque and noise levels to minimize the friction.

## Benefits

NPS ball bearings are long lasting, competitively priced, and light in weight, while strictly adhering to industry standards and technical specifications. Our bearings require minimum maintenance as they can operate without frequent re-lubrication.

Using our streamlined manufacturing processes, we build sturdy ball bearings with finely polished cages and seals, posing several industrial advantages such as:

### Low Noise Levels:

Our bearings produce no noise because of the smooth surfaces, stable cages and optimal internal construction.

### Reduced Friction:

We optimally shape and osculate the bearing surfaces, modifying their waviness and roundness so that the friction is greatly reduced.

### Cost Advantage:

NPS deep groove ball bearings minimize the friction and noise, thereby mitigating energy costs, grease loss, strain on the lubricant, and contamination.

Our bearings can withstand high bidirectional radial, axial, and composite loads, facilitating high-speed operations. Hence, they are ideal for applications where low-noise and minimum vibration is required, such as electrical machinery, ventilators, manufacturing equipment, washing machines, and power tools.

# Miniature and Extra Small Ball Bearings

NPS Miniature and Extra Small Ball bearings are constructed keeping in mind the increase in demands for more sophisticated equipment for advanced technology. Our miniature and extra small bearings are ideal for applications that have large moving parts subject to limited amount of space.

## Features

Our miniature and extra small ball bearings aptly meet your bearing requirements. They are manufactured keeping in mind high precision, incredible load bearing capacity, and minimized friction. Enlisted below are some features of NPS miniature and extra small ball bearings.

### Sturdy Bearing Material:

NPS miniature and extra small ball bearings are made of sturdy materials, which enhance the bearing's durability and reduce maintenance.

### Optimized Raceway Geometry:

Our miniature and extra small ball bearings come with accurate raceway curvature, radial and axial play, ball contact angle, and land and pitch diameters to greatly reduce the load stress on the balls.

### Standard Lubricants:

We use standard good quality grease in our bearings which enhances the bearing's lifetime and eliminates re-lubrication.

# Benefits

We manufacture an exhaustive range of miniature and extra small ball bearings which comply with the industry standards and norms, while aptly meeting your bearing requirements. They are durable, cost-efficient and easy to maintain, making them the ideal option for your industry.

These bearings bring in several advantages such as:

## Improved Reliability:

Our bearings come with a long equipment service life, with better operational efficiency and requiring minimum maintenance.

## Optimal Performance:

Our bearings operate smoothly and quietly with reduced friction and torque levels, thereby giving optimal performance.

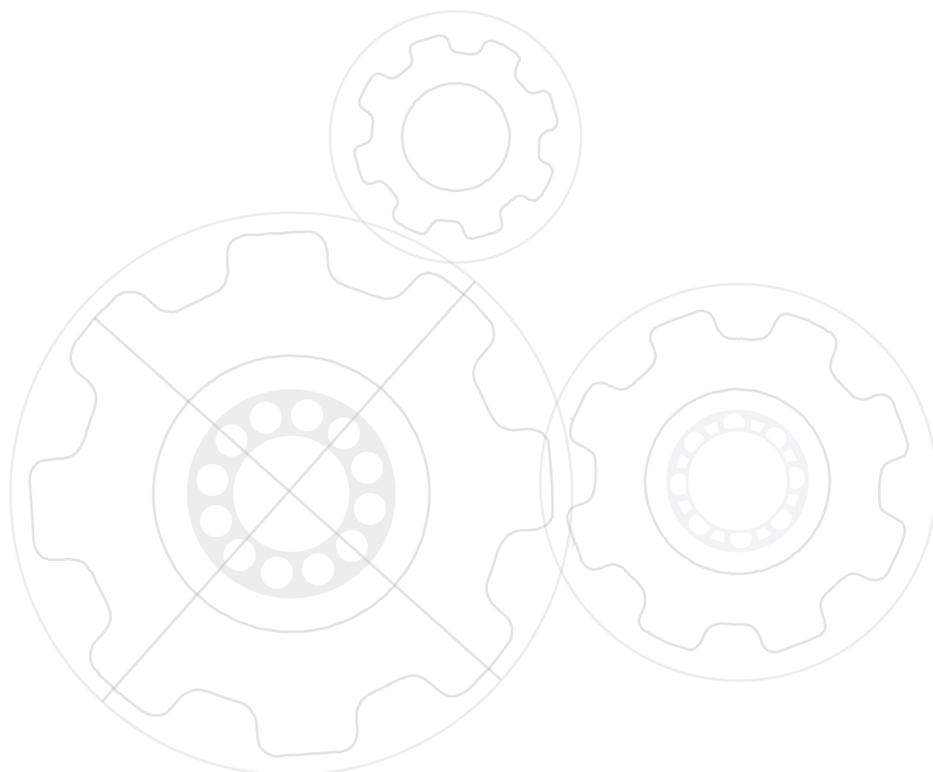

## Lower Ownership Costs:

Since they are highly resistant to wear and tear, our bearings greatly reduce the need for scheduled machine maintenance, thereby minimizing expenditures.

## Highly customizable:

NPS miniature and extra small ball bearings are highly customizable and can easily be used in various applications.

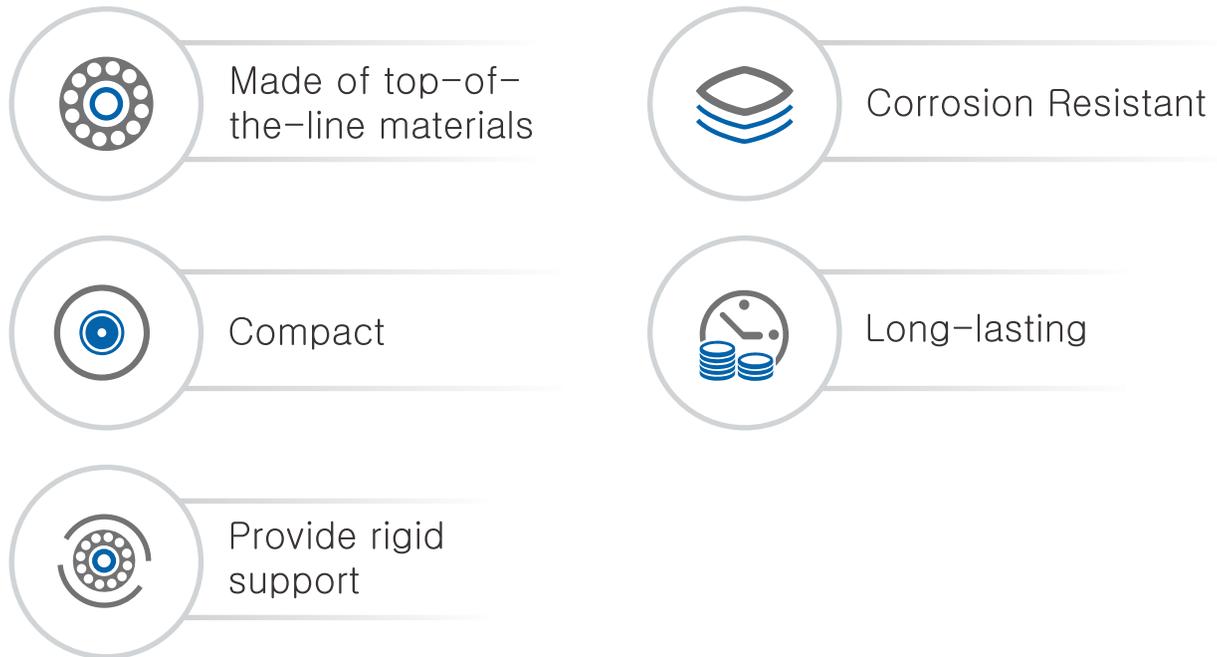

NPS miniature and extra small ball bearings are available in many varieties with different styles, sizes, materials, and combinations. Our products cater to a wide range of applications – from medical applications like dialysis machines, to computer peripherals like hard drives, and office products such as check sorting machines.

# Pillow Block Ball Bearings

NPS pillow block ball bearings are designed with high precision to be tough and corrosion resistant. Our pillow block ball bearings provide rigid support to rotating shafts parallel to the shaft axis. They are designed to be compact and extremely durable.

We offer multiple housing styles for the pillow block ball bearings, which can be selected according to the requirements.

## Features

NPS pillow block ball bearings are the right choice for mounted units as they are designed keeping mind the industrial need for corrosion resistance and enhanced durability. Our pillow block ball bearings stay protected in both wet and dry particle environments. Enlisted below are some of the features:

### Sturdy Housing:

NPS pillow blocks are made of solid material that ensures minimum wear and tear.

### High-precision Design:

Our pillow block ball bearings come with a hardened ball path, while the rest of the inner ring is relatively unhardened. This provides for a better screw positioning.

### Anti-rotation Rivets:

The anti-rotation rivets prevent rotation within the housing, enabling a rigid support.

# Benefits

Our pillow block ball bearings provide a strong support, while enabling easy mounting and ensuring minimum wear and tear to the equipment. NPS pillow block ball bearings have the following advantages:

## Durability:

NPS pillow block ball bearings are durable and ensure little “steel metal buckling”, owing to the sturdy housing and the high-precision design.

## Cost-efficient:

The pillow block ball bearings offer huge cost advantages as they are resistive to bacteria, mold, rust, deterioration, etc., requiring little maintenance.

## Standard Design:

Our pillow block ball bearings comply with various industry specific standards and norms.

Made of top-of-the-line materials, NPS pillow block ball bearings make for an effective solution for conveying equipment, construction machinery, etc., and are ideal for industries such as agriculture, food, chemical, etc.

Industry Segments we cater

Ceiling fans

Textile Machinery

Electric Motors

Power Tools

Agricultural Machinery

Water Pumps

Automobiles

Home Appliances

# Product Specifications

NPS ball bearings are available in a wide range, which find applications in several industries. Our products are customized according to specific standards and requirements. Listed below are the specifications for various NPS ball bearings:

Above bearing models are available in ZZ, 2RS & Open type.

# Pillow Block Bearings

1) Pillow blocks : these include  
**UCP, HCP, UCLP, UKP, UCPX, and UKPX.**

These mounted bearings are used when support for a rotating shaft axis is required. Their design enables them to support the shaft in operations where the mounting surface is parallel to the shaft axis.

2) Flange type : these include  
**UCF, HCF, UKF, UCFX, UKFX, UCFU, UCFC, UKFC, UCFS, UCFL, UKFL, UCFT.**

The flange type bearing housing comes in various shapes and styles such as square, round, and rhombus flange types.

3) Take-up units type : these include  
**UCT, HCT, and UKT.**

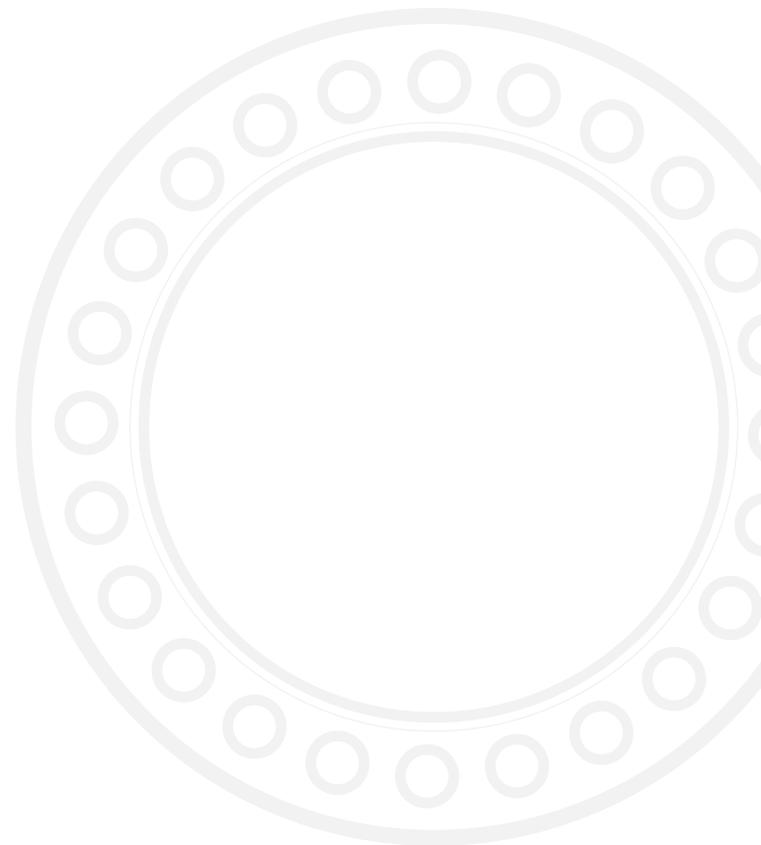

These bearing housings have an inner surface which is concave sphered hence the bearing used has a convex sphered outer surface. They are designed to permit moderate initial misplacement. Widely used in conveyor chains and conveyor belts. A sliding slot at the side of the housing facilitates the free movement of the unit.

4) Cartridge type : these include  
**UCC, HCC, and UKC.**

This type of bearing housing has a cylindrical outer perimeter hence the bearing outer bore is spherical. The entire unit allows free movement in the axial direction and is self-aligning. This type can be used as free side bearings for long shafts because they are capable of accommodating shaft expansion or contraction due to temperature differences. Also suitable where there is adjustment of the axial direction is required.

5) Light duty types : these include  
**SAFD, SBFD, SAFW, SBFW, SALF, and SBLF.**

# We are Bearing Distributors

Established by Mr. Sunil Agarwal in 1988, Bearing Distributors is one of the leading importers and distributors of ball bearings in India. Since inception, we have gradually built our business network across the country, with major distribution hubs at Delhi, Mumbai, Ahmedabad, Kolkata, Hyderabad, Coimbatore, Surat, Chennai, Baroda and various other centers.

We function as the single point of contact for all kinds of ball bearings for all types of industrial purposes and applications. We have an extensive supplier base in China from where we import our products to distribute them across India. We specialize in providing deep-groove ball bearings, miniature and extra small ball bearings, and pillow block ball bearings at competitive prices and within the promised time.

## Why Bearing Distributors?

Best-quality and customized bearings

Multiple warehouses in Bhiwandi (near Mumbai), enabling us to meet our customers' varied requirements

25+ years of rich experience

Products find applications across various industrial segments fan, motor, textile, automobile, power tools, etc

Cost-effective products

End-to-end technical assistance and swift service

Various registered brands (NPS, NRGPLUS, CSR) to cater to diverse needs

# Our Vision

We aspire to be the leading ball bearing supplier in India, catering to various medium and large-scale industries. With our high-quality and cost-efficient products, we aim to engineer an increased mobilization in India's industrial sector that will have huge positive impact on our society.

# Our Mission

We strive to maintain transparency in our internal and external policies to encourage best practices and continue to provide excellent services. We endeavor to deliver world-class products to our customers, with our sincerity, perseverance, and commitment.

# Our Certifications
